

CISSP

The certification that
inspires utmost confidence

For IT Security Professionals

Benefits of Certification to the Professional

- ✓ Demonstrates a working knowledge of information security
- ✓ Offers commitment to profession
- ✓ Offers a career differentiator, with enhanced credibility and marketability
- ✓ Provides access to valuable resources, such as peer network and idea exchange

Benefits of Certification to the Enterprise

- ✓ Establishes a standard of best practices
- ✓ Offers a solutions-orientation, not specialization, based on the broader understanding of the ISC
- ✓ Allows access to a network of global industry and subject matter/domain experts
- ✓ Makes broad-based security information resources readily available
- ✓ Adds to credibility with the rigor and regimen of the certification exams
- ✓ Provides a business and technology orientation to risk management

Attention high-end security professionals!

If you plan to build a career in information security – one of today's most visible professions – and if you have at least five full years of experience in information security, then the Certified Information Systems Security Professional (CISSP®) credential should be your next career goal.

Ideal Audience

The CISSP credential is ideal for mid and senior-level managers who are working toward or have already attained positions as CISOs, CSOs or Senior Security Engineers.

Globally recognized standard of achievement

The CISSP was the first credential in the field of information security, accredited by the ANSI (American National Standards Institute) to ISO (International Standards Organization) Standard 17024:2003. CISSP certification is not only an objective measure of excellence, but a globally recognized standard of achievement.

5 Day Certification Course

Our five day certification course will prepare you to become CISSP certified. The CISSP credential demonstrates competence in the ten domains of security:

1. Access Control
2. Application Development Security
3. Business Continuity and Disaster Recovery Planning
4. Cryptography
5. Information Security Governance and Risk Management
6. Legal, Regulations, Investigations and Compliance
7. Operations Security
8. Physical (Environmental) Security
9. Security Architecture and Design
10. Telecommunications and Network Security
